<b>Storage of:</b>	Food
<b>Month / year:</b>	August 2007
<b>Completed by:</b>	Constructor Norge AS

**ASKO**  
STORHUSHOLDNING

When ASKO Vest moved into a new building, they wanted an optimum utilization of their storage, adapted to their needs. It was required that the installation could be operated by more workers at a time, and that the safety would be taken most effectively care of for both workers, goods, racking and trucks.

### **Solution:**

The solution was conventional stationary racks, P90-Silverline, used in the plants for cooling, freezing and dry groceries, including upright protection for increased safety and optical guiding for trucks, energy absorbent frame protectors, pallet stoppers, mesh shelves and labelling.

Capacities:	Pallet places:	ca.30250 pallets
	Rack length:	55-80 m
	Rack height:	8 meter
	Pallets in height:	5/6 pallets

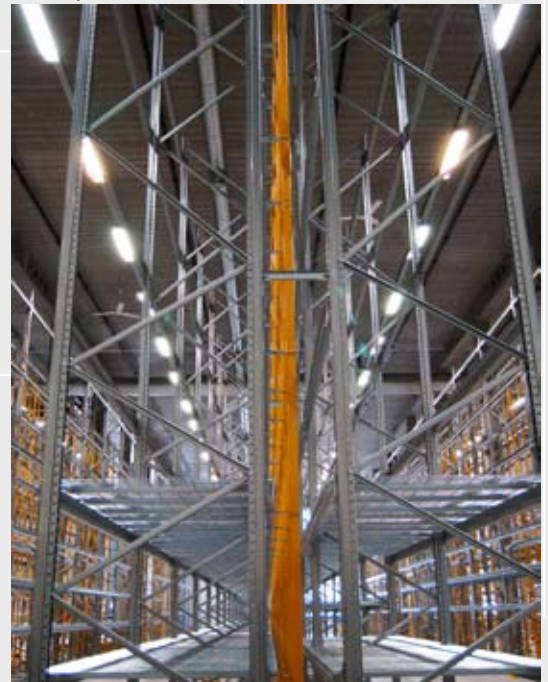

*Upright protectors means safety and guiding*

*Labelling of all racks,  
both frames and  
beams.*

*Frame protectors and tunnel guard*

*Pallet stoppers are efficient protection*
