

Project info

Hessing BV

Project:	Hessing BV
Sector:	Automotive
Product:	Hi280
Storage of:	Automotive Products
Completed by:	Constructor Netherlands

Who drives on the A2 in the neighbourhood of Maarsse is not able to miss the new noise barrier with the building with futuristic look in the middle. The building carries the letters which together constitute the word Hessing. This is the name of the official importer of exclusive cars such as Rolls-Royce, Bentley, Lamborghini and the official dealer of Maserati and Lotus.

Hessing decided to move in 2005 and it didn't take them very long to find a new building. In the meantime the province of Utrecht was advised on Hessing's moving plans and offered the new building along the A2. Originally the building was meant to house offices but on the basis of the architecture it was also fit for a showroom. Hessing's new office indisputably belongs to the most outstanding buildings in the Netherlands and seems to be fully integrated in the futuristically designed noise barrier.

Constructor tailor-made some of the racking for that part of the warehouse where the sides become closer and closer until they touch. In order to be able to realise the same storage capacity on less square meters, the choice was made for two storeys.

The width of the corridors could remain the same, but the height between the shelves was extensively reduced in order to be able to use the storage volume as efficient as possible. Big spare parts like splashboards and exhaust pipes are, for as far as they are, stocked horizontally. This asks for some space but this doesn't cause a problem at the moment as the number in stock is limited. Bentley is an enormous brand and since some times orders are placed on a daily basis instead of on a weekly basis. As a result the stock for huge 'not easy to store parts' can be reduced.
