

Popermo

- story from real life

Project: Popermo, Odense
Trade: Insurance
Product: 2 Compactus® Office installations
Storage of: Records
Month / year: September / 2006
Delivered by: Constructor Danmark A/S

In 2006 Popermo moved from Dalum to Tietgenbyen in Odense, and with this move they gathered several old archives to a new central archive. Popermo wanted an archive close to the working stations on 1st floor and a remote archive at the ground floor.

Solution:

Popermo chose a solution with mobile system for both archives. In this way they obtained double the space compared to a stationary solution.

In the close archive 2 stationaries were installed in each end of the room with 6 double mobiles in between.

In the remote archive are installed 1 stationary and 6 double mobiles. The two installations have a total capacity of approx. 700 effective shelf meter, and the fronts are white steel. Both systems are manually driven with chain/wheel exchange, and in both rooms the shelving goes from floor to ceiling.
