

Syddansk Universitet

- story from real life

Project: Syddansk Universitet, Odense
Trade: Education
Product: Compactus® Archive
Storage of: Books
Month / year: July / 2007
Delivered by: Constructor Danmark A/S

The university was running out of archive space in the basement, and at the same time the University Library was filled with the books, which there was no room for in the archives in the basement.

Solution:

By installing mobile shelving in stead of stationary the University obtained an increase in archive capacity of approx. 75%.

Constructor has delivered 15 Compactus® Archive systems distributed on 7 sections. The bases have a length of 12 meter, and they include 2600 bays. 2 of the systems are assembled back to back, which means that they are operated from each side. At the same time the bases in this back-to-back installation can be positioned in a way to obtain a long, continuous aisle of 24 meter. Today the university disposes of 24 km shelving space on an area of 1 550 m².
